

The Swedish Aral Sea Society are happy to invite all interested participants to the following public lecture:

Basin-scale change in water availability and water quality under intensified irrigated agriculture in the Aral Sea Drainage Basin by Dr. Rebecka Törnqvist.

Time: Wednesday 7/5 2014, 18:30

Location: Stockholm International Water Institute, Linnégatan 87 A, Stockholm

A map can be found at: <http://www.siwi.org/about/contact/>

Changes in land use and water use can greatly impact the cycling of water and water-borne substances. The large-scale hydrological consequences and critical changes of the agricultural expansion within the Aral Sea drainage basin are exceptional. This presentation shows results from Rebecka Törnqvist's PhD project where connections between basin-scale changes in water use, river discharge, water quality and nitrogen loading were performed in order to identify underlying factors for such changed conditions in the Aral Sea drainage basin.

Most Welcome!
